Leadership: Types & Theories

Leadership is an important requirement for social development. We need individuals who can effectively steer groups towards attainment of goals. However, research and experience indicates that good leaders are hard to come by, because of the qualities and abilities leadership demands. One finds individuals with a natural flair for leadership and also individuals who are trained to be leaders. Both aspects of being a ‘born leader’ or a ‘trained leader’ is feasible, according to behavioural scientists. Some authors believe that individuals with substantial experience in working with groups as members (prior to becoming group leaders) are found to excel in leadership tasks. Thus, leadership is an ability that grows out of partaking. While India has had many charismatic leaders, especially in the political arena, in this material we shall be looking at group leaders and their profiles.

Types:
- Democratic
- Autocratic
- laissez-faire

1. Trait(Characteristic) Theory

The Trait Theory of leadership focuses on personal qualities and characteristics that differentiate leaders from non leaders. These traits are being charismatic, enthusiastic, and courageous. The following traits are believed to be possessed by leaders:
- desire to lead,
- ambition and energy,
- honesty and integrity,
- self-confidence,
- intelligence,
- high self-monitoring and job-relevant knowledge.
Thus, traits can predict leadership. They do a better job in predicting the emergence of leaders and the appearance of leadership in actually distinguishing between effective leaders and ineffective leaders. However, the fact that an individual demonstrate the traits and others consider that person to be a leader does not necessarily mean that the leader is successful at getting his group to achieve its goals.

2. Behavioural Theories

These theories propose that specific behaviours differentiate leaders from non leaders. While Trait theory assumes that leaders are born rather than made, behaviour theory believes that if there were specific behaviours that identified leaders, then leadership could be taught through effective training and other interventions.

Task Orientated Leadership

A task oriented leader is one who defines and structures her role and those of the members towards fulfilment of tasks. She plans, organizes and assigns tasks to group members and insists on its completion within the stipulated time.

People Orientated Leadership

A people oriented leader, on the other hand focuses on relationships in the group, has high concern for the members and their comfort level, emotional well-being and contentment. She is keen on helping members in their personal problems, is approachable and does not discriminate.

Development-oriented Leadership

What is most relevant to social group work leadership is the development-oriented leader – the one who values experimentation, seeks new ideas, and generates and implements change. In a changing world, effective leaders need to exhibit development-oriented behaviour.

Heresy and Blanchard’s Situational Theory

This theory looks at leadership through centering on the followers. Leadership, according to this theory is dependent on the follower’s willingness to execute the task in question.
If the follower is:

a) Incapable and reluctant to take up the assigned task, the leader has to provide precise and exact directions to this effect

b) Incapable but prepared to take up the assigned task, the leader has to firstly compensate for the follower’s lack of ability and relationship orientation and also provide precise directions

c) Capable but reluctant the leader has to be helpful and play an active part in task accomplishment

d) Capable and enthusiastic then the leader’s role is minimal

**Path-goal Theory of Leadership**

This theory stipulates that the prime responsibility of the leader lies in helping the members to reach their objectives and that individual goal and group goals are complementary. It is the leader’s job to assist followers in attaining their goals and to provide the necessary direction and/or support to ensure that their goals are compatible with the overall objectives of the group. The term path goal is derived from the belief that effective leaders clarify the path to help their followers get from where they are to the achievement of their work goals and to make the journey along the path easier by reducing roadblocks.
Skills and Techniques of Group Work

According to Trecker (1955), skill is the capacity to apply knowledge and understanding to a given situation. Trecker (1955: 36-37) also has specified skills for social group work as follows:

1) **Skill in Establishing Purposeful Relationships**
   A) The group worker must be skillful in gaining the acceptance of the group and in relating himself to the group on a positive professional basis.
   B) The group worker must be skillful in helping individuals in the group to accept one another and to join with the group in common pursuits.

2) **Skill in Analyzing the Group Situation**
   A) The group worker must be skillful in judging the developmental level of the group to determine what the level is, what the group needs, and how quickly the group can be expected to move. This calls for skill in direct observation of groups as a basis for analysis and judgment.
   B) The group worker must be skillful in helping the group to express ideas, work out objectives, clarify immediate goals, and see both its potentialities and limitations as a group.

3) **Skill in Participation with the Group**
   A) The group worker must be skillful in determining, interpreting, assuming and modifying his own role with the group.
B) The group worker must be skillful in helping group members to participate, to locate leadership among themselves, and to take responsibility for their own activities.

4) **Skill in Dealing with Group Feeling**
   A) The group worker must be skillful in controlling his own feelings about the group and must study each new situation with a high degree of objectivity.
   B) The group worker must be skillful in helping groups to release their own feelings, both positive and negative. He must be skillful in helping groups to analyze situations as a part of the working through of group or intergroup conflicts.

5) **Skill in Programme Development**
   A) The group worker must be skillful in guiding group thinking so that interests and needs will be revealed and understood.
   B) The group worker must be skillful in helping groups to develop programs which they want as a means through which their needs may be met.

6) **Skill in Using Agency and Community Resources**
   A) The group worker must be skillful in locating and then acquainting the group with various helpful resources which can be utilized by them for program purposes.
   B) The group worker must be skillful in helping individual members to make use of specialized services by means of referral when they have needs which cannot be met within the group.

7) **Skill in Evaluation**
   A) The group worker must have skill in recording the developmental processes that are going on as he works with the group.
   B) The group worker must be skillful in using his records and in helping the group to review its experiences as a means of improvement. Thus, the social group worker has many skills to master, but the important ones are discussed below:
Skills in Building Group Cohesiveness

The group worker must know his group members – their strengths, capacities, fears, problems and roles they can play in the group’s progress. The following are the other factors the worker needs to concentrate upon in building himself within the group:

- Effective rapport building with the group members; to get on the same wavelength with people easily and quickly
- Winning the confidence and trust of people by accepting members as they are and enabling them to see the worth of every job that has to be done in the group large or small
- Establishing a good working relationship, based on friendship and mutual confidence that would facilitate influence over the group members
- Ability to avoid splinter groups, especially subgroupism by empathizing and thinking for all the group members. The group worker has to be cautious to interpret the silence of the group members. Silence always does not denote negative aspects; it could just indicate the individuals’ hesitation.
- Skill to remain cool and composed while listening to the distasteful – understanding and internalizing the fact that two people can look at the same thing and look at it differently. It is important that the worker has to strengthen his inner self without getting upset or hitting back at unpleasantness of the group. He needs to understand that this is in light of the larger good of the group.
- Capacity to get the group to willingly shoulder responsibilities rather than taking up all the burden on himself – the ability to segregate works that can be delegated and executing those which are best done by the worker.

Facilitation Skills

This involves the group worker helping the group to stay focused on the goals to be achieved, to ensure that the group members work towards a common direction. Facilitating skill, also sometimes called the “here-and-now” of group interaction is often missed by the group workers.

This is because group processes take a back seat when group interactions are intense. Also, at times the group worker may hesitate to intervene during a lively
yetdispersed discussion. However, the group worker has to acquire this skill to enable spirited group accomplishments. To help a group accomplish the goals it has set for itself, the worker will often find it helpful to guide the group’s interaction in a particular direction. By limiting or blocking a group member’s communications, by encouraging another member to speak or by linking one group member’s communication to those of other group members, the worker can guide the group’s interaction patterns. This method has been referred to as selecting communications patterns purposely (Middleman & Wood, 1990).

Helping the group maintain its focus can promote efficient work by reducing irrelevant communications and by encouraging a full exploration of issues and problems. The group worker does this by minimizing unwanted interactions and by stirring optimum search investigation of concerns and tight spots.

**Skills of Information Collection and Evaluation**

Information is power and this is true in working with groups too. It is handy in impacting communiqué designs in the group. Through information gathering and evaluation skills, the group worker bridges the gap between the process-oriented approach of facilitating group processes and the task-oriented approach of using action skills to achieve goals and satisfy members’ needs. Without effective data gathering and assessment skills, workers’ interventions are not grounded in a complete understanding of the situation. This can result in the use of premature, oversimplified, or previously attempted solutions that have not been carefully analyzed and weighed.

**Requesting Information, Questioning and Probing**

By skillfully questioning and probing the group worker may gather data effectively. A broad outlook to the task in question and to the pursuits of the group could be added (with this supplementary information) that could benefit the group immensely. Skills are needed in properly wording the questions – leading questions; double questions etc. should be avoided. The questions need to extract information that is clear and precise. Care should be taken while dealing with sensitive issues and concerns.

**Analyzing Skills**
Once the data have been gathered and organized, the worker can use analyzing skills to synthesize the information and assess how to proceed. Analyzing skills include:

- Pointing out patterns in the data,
- Identifying gaps in the data, and
- Establishing mechanisms or plans for obtaining data to complete an assessment.

**Synthesizing Skills**

Another useful data gathering and assessment skill is blending verbal and nonverbal communications. Examples of synthesizing skills include:

- Making connections among the meanings behind a member’s actions or words, expressing hidden agendas
- Making implicit feelings or thoughts explicit
- Making connections between communications to point out themes and trends in member’s actions or words

Synthesizing skills can be useful in providing feedback to members about how they are perceived by others.

**Listening Skills**

We convey our listening skills verbally and non verbally. By appropriate feedback and playback the group worker conveys verbally whereas through his eye contact, gestures and body language he conveys it non verbally. Egan (2002) suggests that, in addition to body position and eye contact, skills that indicate that a worker has heard and understood a member are part of effective listening. Research has shown that effective listening skills are an important characteristic of successful leaders (Johnson & Bechler, 1998). Effective listening skills include repeating or paraphrasing what a member says and responding empathically and enthusiastically to the meaning behind members’ communications. They also include what Middleman (1978) has referred to as ‘scanning’ skills. When scanning the group, the worker makes eye contact with all group members, which lets them know that the worker is concerned about them as individuals. Scanning also helps reduce the tendency of workers to focus on one or two group members.

**Reframing and Redefining**
Often, one of the greatest obstacles to the work of a group or an individual is failure to view a problem from different perspectives that block attempts to find a creative solution (Clark, 1998). Redefining and reframing the problem can help members examine the problem from a new perspective. Thus, a worker may want to reframe or redefine an issue or concern facing the group.

**Action Skills**

This includes modeling, role playing and rehearsingsituations in the group. Action skills can be helpful in both task and treatment groups. Modeling refers to the worker or a member demonstrating behaviors in a particular situation so that others in the group can observewhat to do and how to do it. Role playing refers to having group members act out a situation with each other’s help. The two primary purposes of role playing are to assess members’ skill in responding to an interpersonal situation and to help members improve particular responses.

Responses can be improved through feedback, rehearsalf of a new response, or coaching (Etcheverry, Siporin, & Toseland, 1987). Role playing can be a very useful tool when trying to help members improve responses to stressful situations. Rehearsing refers to practicing a new behavior or response based on the feedback received after a role play. Becauseit is difficult to learn new behaviors or to diminish less adaptive but habituated behavior patterns, a member may have to practice a new response several times.

**Confrontation Skills**

From handling conflicts and resistance to enthusing group members, confrontation skills could be a valuable tool for the group worker. Confrontation is the ability to clarify, examine, and challenge behaviors to help members overcome distortions and discrepancies among behaviors, thoughts, and feelings (Egan, 2002; Toseland & Spielberg, 1982). However, one has to vigilantly judge the state of affairs and about the acceptability of his interventions during confronting situations. He has to be fully aware that confrontations are forceful, emotionally charged and also anticipate strong responses. Since confrontations often involve indicating members’ mistakes and limitations, the worker has to prepare the group for a candid examination on these lines by underlining the fact that ultimately such discussions aid in identifying potentials and abilities of the group.
Skills of Conflict Resolution

Conflict resolution skills are needed to smoothen out frictions within the group and also with those outside the group – inclusive of social systems. There could be several grounds for conflicts among the members. The group worker should facilitate the group to consider conflicts as a factor nourishing the group’s development. Conflicts, if constructive and issue based, help the group to get a clearer vision of its goals and discover individual strengths and weaknesses. It is well known that conflicts are bound to happen; through efficient group facilitation, conflicts could be minimized and antagonistic disagreements avoided.

Critiquing Skills

Constructive criticism is an important skill for the worker, for lots of learning happens while critiquing the group’s progression and activities. It enables retaining the focus on the group’s primary purpose. It also means appropriate questioning of the leader’s inputs and interventions, contribution of members and patterns of group’s functioning. Critiquing by members is healthier and many times anticipates and prevents flaws.

Leadership Skills

This is a vital skill that is disputed by researchers – is leadership a trait or a behavior? Is a leader born or made? Despite differing views, it has been proved beyond doubt that leadership skill can be learned. However, there is no one size fits all’ solution to mastering leadership skills. Group leaders have to constantly remind themselves that they are working with human beings each with different viewpoints, personalities and ways of functioning. The key skill of the leader is communicating and keeping communication channels open within the group at all times. This means the leader has to involve all members in discussions – the quiet ones, the ones who may not be comfortable talking in groups or those who can be easily silenced. The other key skills of leadership are:

- Consensus seeking
- Gate keeping
• Setting standards
• Self understanding that leads to enhanced communiqué
• Inter-personal understanding that leads to understanding members’ viewpoints
• Preventing disruptive behaviour such as diverting, blocking, dominating, silence, attention seeking, sympathy seeking etc
